

Installation of BARTSOFT-CE on Windows Mobile®

This document is a guide to installation of BARTSOFT-CE (field version for BARTSOFT) that is available as a single compressed file in '.CAB' format. To install the application, this compressed file needs to be transferred onto the target Windows Mobile® device and run.

1. Software Compatibility

Currently, this software is tested on Windows Mobile (PPC) Version 6 and should be compatible with Version 5 (both with touch screen). This software is not compatible with Microsoft Smartphone®.

- Please ensure that any previous versions of the application are uninstalled before starting. For instructions on how to remove an existing version of the software, see section 'How to un-install' at the end of this document.
- Create a copy of the installable CAB file on the device. There are two ways of transferring this file onto the device:
 1. The CAB file can be stored on a Storage Card (e.g. SD Card) and transferred to the device.
 2. A host PC can be used to copy the installable file directly onto the device using Microsoft ActiveSync®. To download and install this software, see section titled: 'How to install ActiveSync'.
- Run the CAB file to install BARTSOFT-CE. When there is a Storage Card on the device, you will be prompted to choose the destination. It is strongly recommended that the application is installed on the device (not on the Storage Card).

Image 1: If there is a Storage Card on the device then the user is prompted to choose where to install the application.

It is recommended that after the completion of a successful installation, the CAB file is removed from the device and the device is re-started.

2. How to un-install

1. Open the 'Settings' window from the 'Start' menu.
2. From the 'System' Tab, run 'Remove Programs'.

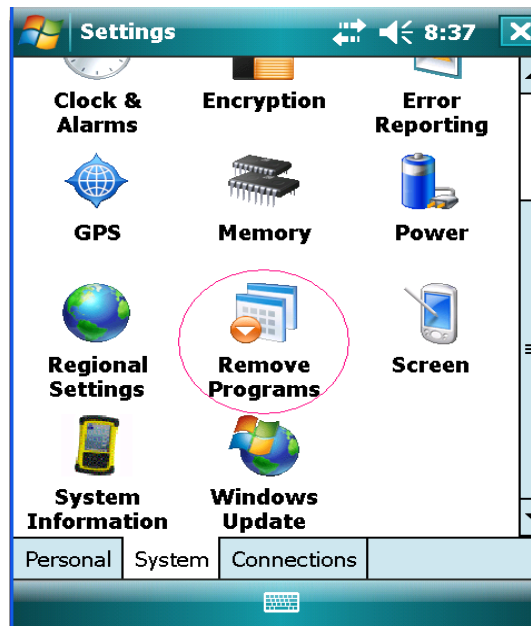

Image 2: Remove Programs

3. Highlight the application you want to remove, before selecting the 'Remove' button.

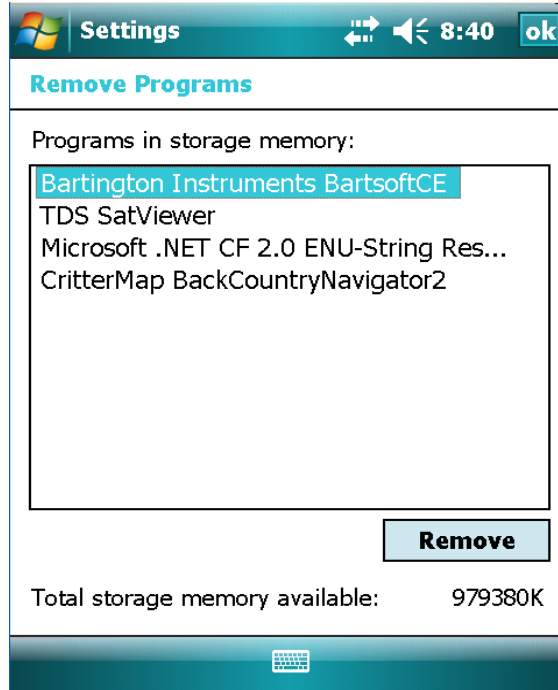

Image 3: Remove BartsoftCE

3. How to install ActiveSync®

ActiveSync can be downloaded from: <http://www.microsoft.com/windowsmobile/en-us/help/synchronize/device-synch.msp>

After installing the ActiveSync, the application should detect the mobile device that is connected via USB cable. For this purpose, you could choose to cancel this window to skip the device synchronization.

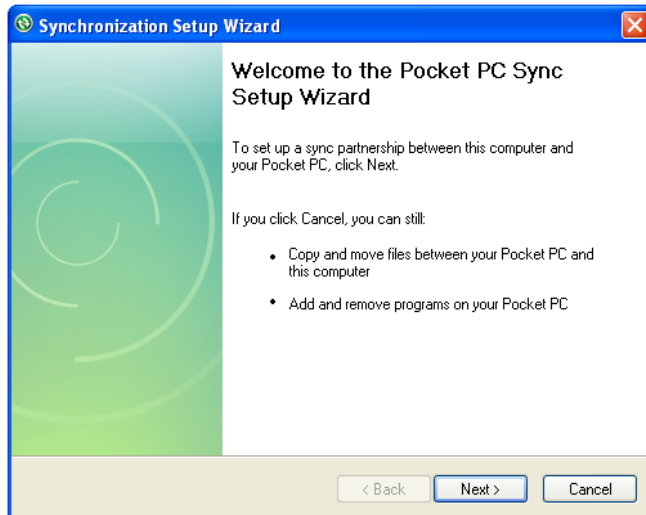

Image 4: A Windows Mobile® device connection is detected.

When the device is connected, select the 'Explore' button to browse the device content.

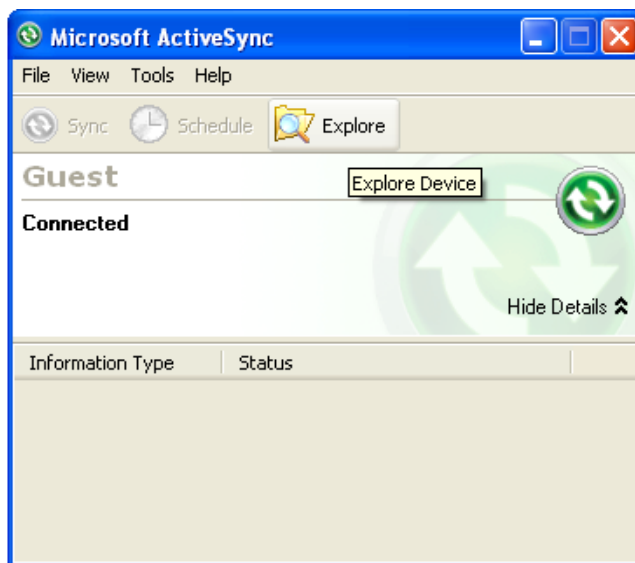

Image 5: Windows Mobile® device is connected.

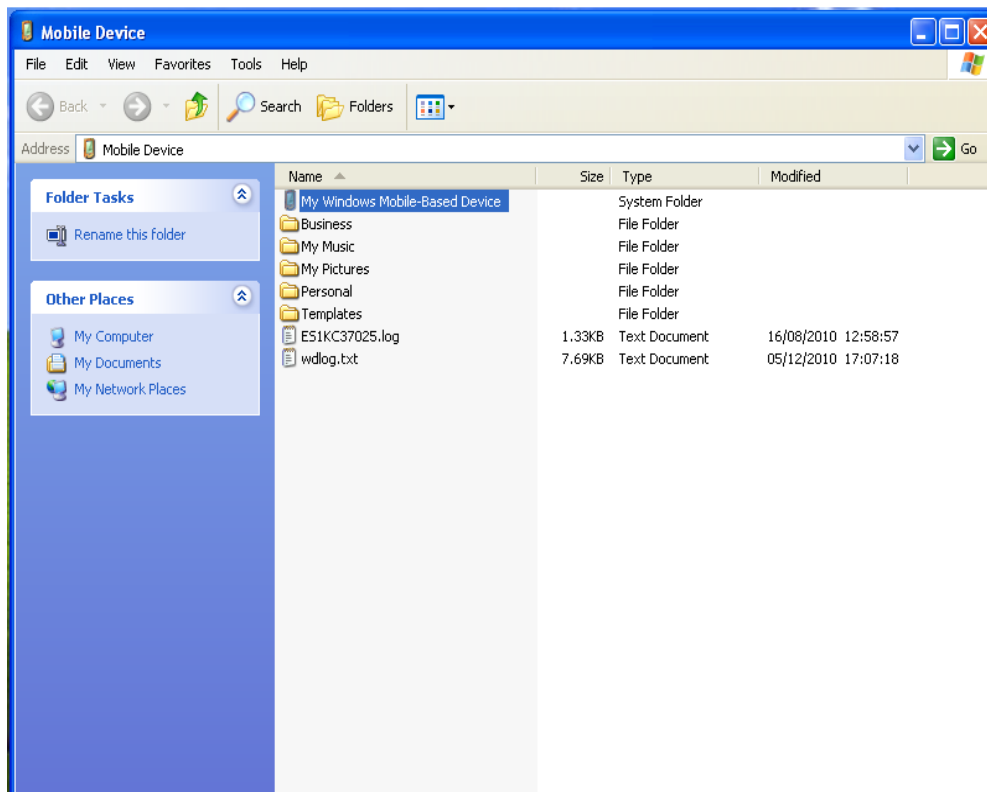

Image 6: Browse to transfer the installable CAB file to the device.
